

ANTHONY ROTHER (HYBRID-SET) tech rider

1 Pioneer DJM 2000 NXS (it must be the **NXS version)**
Power 220 Volt
European power socket

The Pioneer Mixer DJM 2000 NXS is not the MAIN MIXER !
I connect my setup to the Pioneer Mixer DJM 2000 NXS
and then I connect the the Pioneer Mixer DJM 2000 NXS over
my EFX-500 with the MAIN DJ-MIXER **LINE IN** like a CD Player.

I like my setup to stand at the **right side** from the MAIN Mixer.
It needs **minimum 140cm space** (photo attached)

I hope this explains it. If there is something not clear
feel free to ask.

Thanks and greetings
Anthony
